SpecForge Buildathon

Build a real app in one day with AI. No experience needed.

Cynergy Coding Club, RUAS Peenya

Date: Thursday, 29 October 2026
Time: 11:00 check-in, 11:15 to 17:00
Place: RUAS Peenya
Free. Solo. Students of any branch or year

What you will build

A website that reads a messy university course document and produces a corrected one. AI does the heavy lifting. We guide you level by level, and mentors are in the room all day.

What you walk away with

- A working app on your own GitHub
- A score on a live leaderboard
- An e-certificate

Bring

- Laptop and charger
- College ID
- A GitHub account (free, github.com)
- A free AI key (Gemini or OpenRouter). Don't have one? We will help you get it on the day.

Rules

1. You build your own app in your own public GitHub repo, or hand it in as a .zip.
2. Any AI tool is allowed. Say which ones you used.
3. No hard-coding: your app must work on documents it has never seen.
4. Paste your AI key only into your app's Settings box. Never into code or GitHub.
5. Submissions close at 15:45. Then we run your code to confirm the final board.

You do not need to know the tech stack (TypeScript, React, Node, Express). The AI writes the code and we give you the prompts. Your app is scored automatically out of 100. Everything you need is on the portal: **specforge-arena.vercel.app** (sign in with Google).
